Core Features

Foldable Convenience

Quick Deployment

Read-only Protection

Multi-interface connection

Product Introduction

The SalvationDATA Forensic Docking Station is a professional hardware platform for digital investigations. It connects to a laptop or desktop computer through a single Type-C port and provides reliable forensic hardware support for data acquisition and electronic evidence analysis. With multiple built-in forensic interfaces, it supports a wide range of storage media. Read-only interfaces protect original evidence from modification, while high-speed read and write connections ensure efficient data transfer. Its foldable design and lightweight construction of as little as 1 kg make it ideal for both laboratory and field use.

Application Scenarios

1. Mobile field investigations
2. Judicial and law enforcement forensics
3. Enterprise security investigations

4. Data recovery and incident analysis
5. Research and educational training

Features

Write-blocked all-in-one support for major media types (SAS/SATA,SSD,USB) with high-speed transfer.

01

Single Type-C connection replaces dedicated forensic workstation setup.

02

Foldable, portable design for field investigations.

03

Rugged lightweight build for transport protection.

04

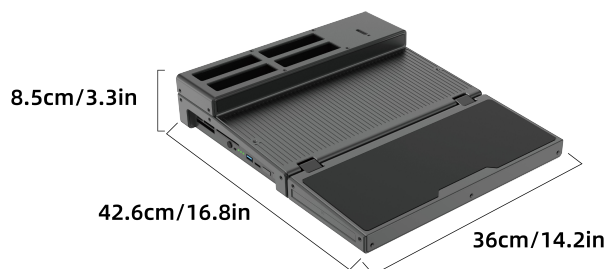

Zero on-device storage with hardware write protection ensuring evidence integrity.

05

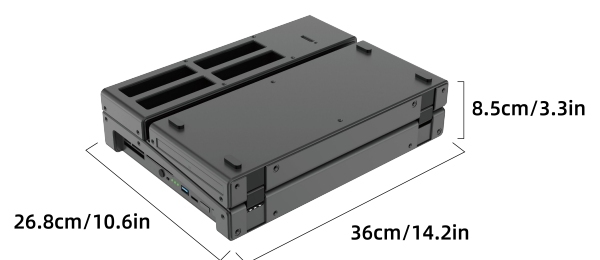

Built-in Blu-ray burning for secure forensic export and archiving.
